Microsoft Digital Literacy - IT Basics, Internet & Productivity Programs

What is computer literacy? Computer literacy is defined as the knowledge of basic hardware, software, and Internet concepts that allows one to use personal computers for important activities such as data entry, word processing, spreadsheets, and electronic communications. This course will first introduce you to the Internet and the World Wide Web. It will teach you about the uses of the Internet, the requirements for an Internet connection, the types of Internet connection, and bandwidth.

Fundamentals of Economics

This course begins by discussing relative scarcity, efficiency and welfare, cost of choice, and economic system. You will learn that human wants for goods and services can never be fully satisfied because the resources, also known as the factors of production or inputs in the production process, are limited. With this course, you will learn that wants are the material desires of individuals and groups of people that stimulate economic activity as producers try to satisfy them.

Microsoft Access 2010

Microsoft Access 2010 is a software program used to build and run databases. You do not need any prior experience working with Access to follow this free course, but if you are familiar with previous versions, then this course will help you quickly make the transition to this upgraded version. In this course you will learn how to design and create tables for a new database. You will learn how to construct these tables in the database and link them with primary key fields.

Diploma in Teaching Skills for Educators

Being an effective teacher requires a variety of skills but some of the most important are the ability to communicate effectively with students, motivate students to learn, and implement successful instructional planning within the classroom. Alison's Diploma course will help you further explore and understand the importance of these skills, and how they impact each individual in the classroom.

Algebra in Mathematics

Do you know that the word algebra came from the Arabic word al-jabr. This word dates back to the title of a 9th-century manuscript written by the mathematician Al-Khwarizmi, who is known as the Father of Algebra. Now that you know whom to thank Algebra for, it's time to learn it. First, this course will clearly explain the basic operations of addition and subtraction, and will show you how to simplify quadratic equations. This will make your future algebra studies much easier.

Progress
31%

Diploma in Mathematics

The course covers a comprehensive range of key subjects in mathematics. Starting with calculus and geometry, the course guides you through the mathematics behind shapes and design principles. Next, the course moves through functions, vectors, and data distributions. These are highly important principles used in rocket science, the military, and aerospace engineering. The course will then introduce you to algebra and trigonometry, which are core to a future in any mathematics-oriented career.

Diploma in C Programming

The C programming language is one of the most popular and widely used programming languages and is commonly used to program operating systems such as Unix. It is a general-purpose programming language and one of the main advantages of programming in C is that it allows the programmer to write directly to memory. This means that key constructs within C-generated software programs can be used within the memory in an efficient and machine-independent fashion.

General Data Protection Regulation (GDPR)

If your business collects data on individuals, whether it's files, photos, contacts (anything at all), then GDPR is incredibly important for you. Companies that fail to meet GDPR standards violate important laws, put consumers in danger, and could be put out of business if they are caught. What's more, GDPR can be complicated and hard to understand. This course makes things simple, so that you can make sure the business you manage is meeting GDPR standards.
